c1 fear, c2 black light [scorn remix], d1 stillness (re-edit), d2 chaos (re-edit)

end.user is one of the cornerstones of the modern eclectic electronic music. releases across many platforms have built him into a juggernaut. a usually prolific artist, having recorded for hymen, ad noiseam, sublight, cargo, and many others, he took 2007 off, working on something very special: his debut on ohm resistance and the 2x12" vinyl version on hymen records. having relocated to san francisco, a new lease on his creative power is demonstrated adroitly over the entire album.

left shows the most range of end.users album making career. intensely personal, intensely musical, and just plain intense at points, the album showcases a spectacular array of skills across the board. from radio play material (black light) with australian vocalist sol thomas, to collaborations with and remixes by influential electronic acts like scorn, to absolutely stunning, no boundaries drum n bass, the album is diverse and full of powerful compositions. compelling from start to finish, left is the culmination of more than a year's work.

this vinyl version contains six tracks that can be found on the cd release, including the black light remix by scorn. furthermore there are two re-edits on side d which are vinyl-only tracks!
